

Mobility AI your auditor will trust.

Every AI recommendation is reviewed by a person, every decision is logged with the AI output behind it, and every answer is grounded in your own policy and cited.

“Ready,” not “certified.” No EU AI Act certification scheme exists yet. *Ready* means ReloPass already operates the controls the Act asks for — human oversight, transparency, record-keeping, data governance — so your compliance team can document them now, as the Act’s obligations phase in.

HUMAN OVERSIGHT — A PERSON DECIDES, EVERY TIME

No AI recommendation is applied without a human decision. ReloPass surfaces a recommendation; a named HR or admin user records an explicit decision (override and reject require a written reason). The decision is stored next to the exact AI output behind it — the Article 14 evidence high-risk HR systems must keep.

- 1 AI recommends** — a policy insight, exception assessment, or provider/corridor match, with its reasoning and source policy shown.
- 2 A human reviews** — a named reviewer reads it in context. Nothing is auto-applied.
- 3 The decision is logged** — accept / override / reject, plus reviewer, timestamp, and the original AI output, in an immutable record.
- 4 Auditors can replay it** — every AI-assisted decision is queryable and exportable on demand.

TRANSPARENCY, DATA & RECORD-KEEPING

- ✓ **Cited, not invented** — the policy assistant answers only from your published policy and shows the source for each claim; if a question isn’t covered, it says so.
- ✓ **Purpose-bound, EU-hosted** — personal data is processed to run the case it belongs to, scoped to the employee’s company, on EU-region infrastructure with row-level tenant isolation.
- ✓ **A regulator-ready trail** — decisions, document changes, and AI-assisted actions are recorded with actor, timestamp, and the data they touched.
